DESCRIPTION.

Tables II-A, II-B and III.

CHAPTER I OF A VOLUME.

The Nawabshah district is situated on the left bank of the river Indus between 27°15' and 25°45' North latitude and 67°50' and 69°5' East longitude. It is bounded on the north by the Khairpur State, on the east by the same State and the Thar and Parkar district, on the south and south-west by the Hyderabad district and on the west by the river Indus. The river, being uncertain in its course, is not always the boundary of the district, and at the present time a portion of Kandiaro taluka lies on the right bank, and contiguous with the Mehar taluka of Larkana district. The area of the district is 3,866 square miles; its greatest length from north to south is 104 miles, and its greatest breadth from east to west 64 miles.

Except for a portion of Nawabshah taluka, which includes part of the great Indian desert, the district forms a piece of the alluvial plain of the Indus. It has, however, never been subject to the river floods or 'lets' like the country to the north of it. Although a strip of the eastern border of Khairpur where it touches the Kandiaro and Naushahro talukas is irrigated, the sand hills of the desert are already in sight. Near Kot Lalu station on the North-Western Railway the Khairpur boundary turns at right angles eastward to the Jamrao Head, so that the district at this point includes some of the Desert, here known as the 'Ganjo Thar'. But a little further south the Desert itself curves sharply away to the east, following the corresponding curve of the mountains on the other side of the river, just as one rut of a cart track follows the curve of the other. Consequently the sand hills leave Nawabshah taluka at its south-east corner and Sinjhora taluka, like Shahdadpur to the west of it, is on the alluvial plain of the Indus. The four northern and western talukas comprising the Naushahro sub-division are much like any other talukas in the Indus Valley, except that the land lies rather higher than it does on the right bank, so that no river bunds are

required in the district. Further east, along the western edges of Nawabshah and Shahdadpur talukas runs a belt of 'dhoros', ravines, mounds and low sand hills, which marks the course of an old bed of the Indus, probably the one which flowed through the Aror Pass and had one of its mouths in the Rann of Kachh. East of this, until the great sand hills of the Desert are reached, the soil is again flat and alluvial, though of a somewhat different type. The spring level is very low and light, and sandy soils alternate with hard clayey loams. This country includes the eastern part of Nawabshah taluka and most of Sinjhora which are now fairly closely cultivated throughout on the Nasrat and Jamrao Canals. But formerly it was little but an expanse of flat bare earth, beside which the Thar Desert seemed green and well watered.

Geographically most of the district is in what is termed vaguely 'Vicholo' or Middle Sind. Nawabshah town is indeed almost the exact centre of the province.

Climatically however the district is divided very sharply into an Upper Sind half and a lower Sind half. The dividing line runs from Sehwan Ferry eastwards to the Gango

Climate.

Thar opposite Daur railway station. This division corresponds to, and is in fact caused by, the eastward trend of the mountains which has been mentioned above. To the south of this line throughout the six hot months a strong steady sea breeze blows a great part of every day and the whole of every night, its usual direction being south by west. It is frequently accompanied by dust. By day Nawabshah is hotter than Hyderabad but cooler than Larkana and drier than either. By night it is never really hot at all. To the north of the line this breeze disappears and the climate has the full rigor of the Upper Sind hot weather. With the change of climate the appearance of the country seems to change too. Wooden tyred bullock carts, irrigation wells, and fine avenues of Sirah and Nim trees are all noticeable signs of Upper Sind. A less prosperous sign is the disappearance of the excellent fodder grasses (Khia and dimri) which are fairly common in the cooler and rainier south. In most parts juari and wheat take the place of bajri and cotton; but this distinction has been somewhat changed by the Nasrat Canal. The Nasrat country was colonised by

a mixed population which has spread cotton to the north and juari to the south of the dividing line. At the same time the Panjabi colonists on the perennial Jamrao have covered with wheat fields the southern taluka of Sinjhora where that crop was hardly known before.

The rainfall at Nawabshah shows a normal mean of 5.72 inches per annum. The four northern talukas receive rather less than the southern ones. The bulk of the rain falls in the monsoon months. The cold weather rains, which are so useful for the rabi crops of Upper Sind, are very infrequent. Frost in the district is practically unknown.

POPULATION.

Tables I, IV, V and VI.

CHAPTER IV OF A VOLUME.

The district had not come into existence when the census of 1911 was taken. The following figures have been taken from the returns of the Hyderabad and Thar and Parkar districts. The population amounted to 448,478 persons, of whom 351,261 were Muhammadans, 95,362 Hindus and the remainder Christians and others.

The figures for the same area at previous censuses are as under :—

1872	..	275,303
1881	..	252,742
1891	..	334,009
1901	..	355,439

The large increase at the census of 1911 is due to the extension of the Nasrat Canal and the opening of the Jamrao Canal and the colonization of the areas commanded by them.

The number of females to every thousand males in the district is shown below :—

Proportion of sexes.

Total population.	Muhammadans.	Hindus.
810	800	849

A similar disparity is noticeable in every other district, and no satisfactory explanation of the phenomenon is forthcoming.

The district is one of the most populous, as it is one of the most fertile in Sind. At the time of the census of 1911 the area which now forms the district contained only one Municipal town, Tando Adam, the population of which was returned at 10,013. The whole population may therefore be regarded as rural, and the average number of inhabitants to the square mile works out at 116, which is not far short of 128, the figure for the Larkana district on the opposite bank of the river. The most densely populated region is the Kandiaro

taluka who has 202 inhabitants to the square mile, corresponding to the 214 of the opposite taluka in Larkana district, Labdarya. The least populous region is Nawabshah taluka with 37 persons to the square mile. Since the formation of the district Shahdadpur has been converted into a Municipal town. Otherwise the district is conspicuous for the large number of villages, which are just too small to be constituted into Municipal areas.

It is impossible to extract from the census returns any information about the movements of the population. It is probably less than anywhere else in the province owing to the absence of large towns and the lack of communications eastwards through the desert.

The census returns begin with a very large item called 'Arabs'. It is not easy to say who these are. It is true that a large number of the great zamindars are Saiyids, the best known being the Honourable Khan Bahadur Allahbando Shah of Dabhro and Khan Sahib Murad Ali Shah of Bhiria. But they are more prominent than numerous, and it is hard to believe that the descendants of the prophet, even with the addition of the Kureshis and Ansaris, can account for so many thousands. No doubt many have given these names falsely and probably the Kalhoras have been included under the head of Arabs, although they are really a mixed crowd of murids of a Kurdish murshid. The highest figure on the list is that of the Samas. There is the usual uncertainty about the exact origin of the numerous tribes which come under this head. But their habits and features show them clearly to belong to some Rajput clan, whether it be the Sama division of the Yadav or some other. In Sinjhor taluka is the residence of one of the Sindhi chiefs, Khan Sahib Mitho Khan, Jam of the Junejo tribe. Other common tribes are the Uner, Bughia, Sathar, Rahu and Dahri.

Of non-Jamot tribes the Machhis of the Solangi and Kiria sub-divisions are most common in Sakrand. There are not many Sirais, the chief tribe of Panjabi origin being the Zardari Jats, who inhabit the wild country along the old river bed and combine camel breeding with agriculture. Baloches include the Talpurs, some of whom are peasants

while others, such as Mir Mehrab Khan of Mehrabpur, are grandsons of ruling princes. The latter, who include branches of the Ulra as well as the Khairpur family, mostly live just outside the Khairpur border. But a certain number of Junior Talpurs of various families have settled on the Nasrat and the Jamrao. There are also a few Marris, descendants of the Mirs' Feudatory army, and some miscellaneous Baloch graziers on the edge of the desert. The remainder are recent immigrants from the Sehwan mountains and from the northern frontier. Some have come to avoid starvation, some to avoid blood feuds: others to find investments for their money or their skill in rice growing. Most of them call themselves Rinds, but many are really Bangwars or Jagiranis. The chief man of the Baloches in the district is Wadero Gul Muhammad, who is a cousin of the Rind Chief and formerly lived at Pir Arain in Sehwan taluka.

There are over twenty political pensioners living in the district, but except Mir Mehrab Khan mentioned above none is of importance.

The chief Jagirs are those belonging to Rasul Bakhsh *walad* Fateh Muhammad Khan Mari, Rasul Bakhsh *walad* Bilawal Khan Lekhi, Mir Khair Muhammad Khan *walad* Mir Khuda Bakhsh Khan and Mir Ali Nawaz Khan *walad* Ghulam Murtaza Khan. The last two are representatives of the four great Talpur families.

AGRICULTURE.

Tables VII, VIII and XIII.

CHAPTER V OF A VOLUME.

The increase of area in 1915-16 as compared with 1910-11 shown in Table VII is mainly due to the results of the revision survey.

The 'others' in the same table shown under "not available for cultivation" consist of (1) uncultivable lands, comprising desert and sandy lands and saline tracts, (2) lands set apart for special purposes, *e.g.*, Government buildings, (3) lands set apart for public purposes, *e.g.*, for burial grounds, roads, railways, musafir khanas and (4) land eroded by the river Indus.

The general aspect of the district has been described above. With the exception of the desert portion of Nawabshah taluka the remainder is of uniform character, the land is high lying, and the agricultural conditions do not greatly vary in different parts.

The Naushahro division consists of the Kandiaro, Naushahro, Moro and Sakrand talukas.

Kandiaro.—This taluka is protected throughout its river frontage by a belt of forests from two to three miles in width. Its surface has been described as having the appearance of two great land waves with three troughs or depressions rolling out from and running parallel to the Indus. The main canals flowing through it are the Nasrat, the Naulakhi and the Mehrab Wah. The land is high and in 1915-16 no less than 3,604 irrigation wells were enumerated. About 70 per cent. of the cultivation is on lift and the remainder on flow. The main kharif crops are juari and bajri and the main rabi crop is wheat.

Naushahro.—The old eastern course of the Indus marks the length of this taluka either by a deep continuous bed of sand or by a well defined low tract. The riverain border is covered with forests, which at times suffer from the encroachments of the river. The main canals are the Nasrat, the Imamali Wah, the Kotai Wah, the Murad Wah, the Bag Wah, the Peroz Wah and the Dambhro Wah.

Approximately half the cultivation is on lift and half on flow. Wells are therefore not so numerous as in Kandiaro. The staple crops are the same as in that taluka although a little cotton and rice are grown.

Moro.—This taluka is geographically similar to Naushahro taluka. Its main canals are the Dad and the Dambhro. Its cultivation is half on lift and half on flow and the staple crops are the same as in Kandiaro and Naushahro. Jambho is also extensively grown.

Sakrand.—This taluka has a very large area adjacent to the river under forest. There are also more trees and more jungle in it than in any other taluka of the division. It is irrigated by the Dad Canal and its branches, and by the Ren Wah. The areas under lift and under flow irrigation are approximately equal. The area under bajri is about double that under juari. Considerable areas are under rice and cotton. In rabi jambho and wheat are the main crops.

The Nawabshah Division consists of the Nawabshah, Shahdadpur and Sinjhoru talukas.

Nawabshah.—This taluka, formerly known as Nasrat, contains two distinct parts which are divided by the Nasrat Canal. The eastern part is sandy and desert. The western is cultivated, being irrigated by the Nasrat Canal and its branches, and by the Dad Canal and its branches. About three fourths of the cultivation are on flow, and bajri and cotton are the staple crops.

Shahdadpur.—The western border of this taluka is formed by what must have been an old bed of the river, as a series of dhoros, ravines, mounds, and low sand hills run along it. The irrigated area lies high, and about two thirds of it are cultivated on lift. Cotton and bajri are the predominant crops. The main canals are the Dad and its branches, the Ali Bahar Kacheri and the Great Marakh.

Sinjhoru.—This taluka is separated from Shahdadpur taluka by the Jamrao Canal. This canal and its branches irrigate it. The main crop is cotton, although the area under wheat is on the increase. Two thirds of the irrigation are by flow.

Something has been said above about the main characteristics of the soil of the district. As in the Hala division of Hyderabad district the main soils are:—

- (1) Dasar.—Suitable for juari, bajri, cotton and tir.
- (2) Wariasi.—Suitable for gourds and melons.
- (3) Kalarati.—Suitable for rice.
- (4) Khahuri.—Suitable for all crops.
- (5) Shor-kalar.—Not suitable for cultivation.

The properties of these soils have been described in detail in the A Volume.

The main crops as stated above are juari, bajri and cotton in kharif, and wheat and jambho in rabi. The area under rice is comparatively small. The character of each crop has been fully described in the A Volume.

A conspicuous feature of the north of the district is the number of gardens. Both European and indigenous fruits and vegetables grow very well in them. The oranges of Tharushah have a special reputation. Mangoes and lemons also flourish.

IRRIGATION.

*Table X.**CHAPTER VI OF A VOLUME.*

The revenue limits of the district do not correspond with those into which Sind has been divided for irrigational purposes, and although the Nasrat Canals district (formerly known as the Northern Hyderabad) is wholly contained in the revenue district, some part of the Hyderabad Canals district also irrigates it. A full account of the Canals has been given in Chapter 6 of the A Volume and figures in respect of them are given in Table X below. Since the A Volume was written the Ren Wah has been remodelled and extended, and has brought a large area of Sakrand taluka under cultivation. New heads for the Nasrat, Naulakhi, and Mehrab Wahs have been constructed. A project known as the "lower Dad remodelling project" is under preparation, and by means of new regulators is designed to raise the water level, to bring a large area of new land under cultivation and at the same time to prevent flooding at the tail, in consequence of which a considerable area of land in Shahdadpur taluka is rendered unfit for cultivation.

The proposed Rohri Hyderabad Canal is designed to pass through this district and will command the areas which are at present beyond the reach of irrigation.

ECONOMIC.

*Tables XI and XII.**CHAPTER VII OF A VOLUME.*

Rents, wages, prices, credit and indebtedness have been discussed for the whole Province in Chapter 7 of the A Volume, and this district scarcely presents any special features. The prices of grains are practically the same as in the adjoining district of Hyderabad. Wages are lower, the reason being that there is no large town like Hyderabad to put them up.

TRADE, INDUSTRIES AND COMMUNICATIONS.

CHAPTER VII OF A VOLUME.

The district is a purely agricultural one. Its principal crops are juari, bajri and cotton, and these are exported. The only imports are clothes, rice, sugar, and articles of European manufacture. The export by river is negligible and transport by road is a thing of the past. The traffic is entirely by railway, but detailed statistics are not available. Tando Adam is the chief business centre of the district, and agencies of some of the European firms of Karachi are established there. There are 14 cotton ginning factories in the district, half of which are at Tando Adam. There are also a few rice husking factories.

Twenty-four fairs are held at different places throughout the year, and a considerable retail business in the ordinary necessities of life is done at them.

There is no important industry other than that of agriculture. Pack saddles are made at Khadro and rough woollen carpets at Pad Idan, but both industries are on a very humble scale.

The North-Western Railway runs through the length of the district from Mehrabpur to Tando Adam. It has already been described in the A Volume.

A light railway from Mirpur Khas in Thar and Parkar district runs north and parallel to the Jamrao Canal to Khadro in Sinjhor taluka, having stations in this district at Bobi, Jhol, Sinjhor and Khadro. It is in contemplation to extend the line to Pritamabad. The line belongs to a private Company, and was opened for traffic in 1912.

Schemes have been put forward at different times for extending this railway to Nawabshah, and for constructing another feeder line from Mehrabpur to Pad Idan serving Halani, Kandiaro, Tharushah and Naushahro. But neither scheme has up to the present materialized.

The road communications of the district are on the whole good, and though no road is metalled, they have up to the present

served the traffic that plies upon them quite satisfactorily. It is impossible to enumerate here more than the chief roads and the places at which they touch.

The trunk road from Rohri to Hyderabad runs throughout the district. The following are its stages :—

Stage.	Distance in miles.
From Mohbat Dero Sial to Kandiaro	.. 10
Bhiria	.. 10
Naushahro	.. 6
Sadhuja	.. 9
Moro	.. $7\frac{1}{4}$
Shahpur	.. 7
Doulatpur	.. 7
Kazi Ahmed	.. 16
Sakrand	.. 10

Six and a half miles south the district border is reached and the road enters the Hala taluka of Hyderabad district. The road is bridged throughout, and at each of the stages except Shahpur there is a musafirkhana. Sweet water wells are in existence at each stage, whilst there are bungalows at the Taluka headquarter towns and at Kazi Ahmed.

From Kandiaro the following branch roads take off: to Kandiaro Station (10 miles east), to Lakha (6 miles south), to Tharushah ($10\frac{1}{2}$ miles south-west), to Dabhro (6 miles south-west), to Kamal Dero ($5\frac{1}{2}$ miles north-west), to Mohbat Dero Jatoi (6 miles north) and to Halani (6 miles north-east).

In Naushahro taluka roads branch off from Bhiria to Tharushah (6 miles north-west), to Lakha (6 miles north-east), to Bhiria road railway station (6 miles east) and to Pad Idan (12 miles south-east). From Naushahro roads go to Tharushah (7 miles north) to Pad Idan railway station (11 miles east), to Phul (7 miles south) and to Mithiani ($10\frac{1}{2}$ miles west).

In Moro taluka, a road goes 7 miles east from Sadhuja to Phul. From Moro roads proceed to Sahra (13 miles north), to Bandhi station (21 miles east), to Gachero (7 miles south-west) and to Lalia ($7\frac{1}{2}$ miles west).

In Sakrand taluka a road goes north from Kazi Ahmed to Thall 11 miles, while from Sakrand roads go to Nawabshah (16 miles north-east), to Sarhari railway station (13 miles east) and to Mehrabpur (10 miles west).

From Nawabshah a road goes north parallel to the railway past the stations of Bucheri, Daur, Bandhi, Kot Lalu to Pad Idan (37 miles). Other roads go from Nawabshah to Chanesar (12 miles west), to Jam Sahib (13 miles east) and to Shahpur (14 miles south-east).

From Shahdadpur roads go to Sakrand (20 miles north-west), to Shahpur (16 miles north) and on to Khadro (6 miles east from Shahpur), to Jhol (16 miles east), to Berani (15 miles south-east), to Bhit Shah (9 miles south-west) and on to Hala (6 miles), and to Tando Adam (11 miles south). From Tando Adam roads go west to Hala (12 miles) east to Berani (9 miles) and south-east to the border of Tando Allahyar Taluka (2 miles).

Sinjhero is connected by road with Sanghar (10 miles east), Landhi (8 miles south-west) and Jhol (10 miles south-east). From Jhol a road goes to Berani (13 miles south-west).

Ferries are established at regular intervals on the river and are controlled by the Local Board :
Ferries. the receipts are evenly divided by the boards of Nawabshah and Larkana districts. At present the number of ferries is 23.

REVENUE.

Tables XIV, XV, XXII-A and B, XXIII, XXIV, XXV, XXVI-A and B.

CHAPTER IX OF A VOLUME.

Table XV gives very complete figures of the rates of assessment payable under the current settlement in each taluka and calls for no comment, though it may be pointed out that a different settlement is in force in that part of Sinjhoru taluka which is irrigated from the Jamrao Canal. Proposals have recently been prepared for a new settlement in this tract and for Sakrand taluka, but they have not yet been sanctioned. For settlement purposes the district is a normal one.

The figures of revenue given in Table XXII-A are expanded under different heads in the six succeeding Tables. Forest revenue is excluded from this Table, and shown separately in Table XIV. The head 'other sources' includes opium and other sources of provincial revenue described in the A Volume, and also that which is derived from the fisheries in the district. An account of the fresh water fish and fisheries of Sind has found a place in Chapter II of the A Volume. The right to fish in the Indus and in the canals and dhands within the district is annually sold by auction. In the case of canals and dhands filled by canals the proceeds are credited to the Public Works Department. In the case of the Indus and of dhands filled by river water the proceeds go to the Revenue Department.

JUSTICE.

*Tables XVI to XXI.**CHAPTER X OF A VOLUME.*

The courts existing in the district for the administration of criminal and civil justice with their respective jurisdictions are shown in the following table :—

Name of Court.	Jurisdiction.
Court of the District Magistrate ...	The whole district.
" Sub-Divisional Magistrate, Naushahro.	The Naushahro division.
" Sub-Divisional Magistrate, Nawabshah.	The Nawabshah division.
" Resident Magistrate, Naushahro.	The Naushahro, Kandiaro and Moro talukas.
" " " Nawabshah.	The Nawabshah, Sakrand, and part of Shahdadpur taluka.
" " " Tando Adam.	The Sinjhor and part of Shahdadpur taluka.
Seven Courts of Mukhtiarkars and Magistrates, one in each taluka.	Within taluka limits.
Seven Courts of Head Munshis and Magistrates, one in each taluka.	Within taluka limits.
Court of the Mahalkari, Nawabshah	.. Nawabshah taluka.
Subordinate Civil Court, Naushahro	.. Naushahro, Kandiaro and Moro talukas.
" " Shahdadpur	.. Shahdadpur, Sakrand and Nawabshah talukas, and the Hala taluka of Hyderabad district.

The District and Sessions Court of the district is situated at Hyderabad. Proposals are under consideration for a separate court for the district.

The District Magistrate is by law a Magistrate of the first class. The Sub-Divisional Magistrates and the Resident Magistrates are invariably first class Magistrates. The Mukhtiarkars exercise either first or second class powers and the Head Munshis ordinarily exercise third class powers. Special Magistrates are periodically appointed, but their powers vary.

The Subordinate civil court of Shahdadpur holds its sittings at Nawashah in the months of September, October and November. The Sinjhor taluka is included in the jurisdiction of the subordinate civil court of Mirpur Khas in the Thar and Parkar district.

A Sub-Registrar has his office at all the taluka head-quarters except Sakrand and Sinjhoru. **Registration.** The work of Sakrand taluka is done by the Sub-Registrar at Nawabshah, and that of Sinjhoru taluka by the Sub-Registrar at Shahdadpur.

There are eight sub-jails in the district, seven being at the taluka head-quarters and one at **Sub-Jails.** Tando Adam. There are also lock-ups at the following Police stations: Tharushah, Doulatpur, Kazi Ahmed, Shahpur and Bobi.

LOCAL AND MUNICIPAL.

*Tables XXVII A and B and XXVIII.**CHAPTER XI OF A VOLUME.*

The District Local Board which was created in April 1913 is composed of nine nominated and sixteen elected members. The former include the Collector, who has always been appointed President, the Assistant and Deputy Collectors and the Executive Engineer, Nāsrat Canals. The elected members consist of three representatives of the Shahdadpur taluka Local Board, two of each of the remaining Boards, and one of the holders of entire alienated villages (Jagirdars). The Taluka Local Boards were in existence before the formation of the district. Their composition is exhibited below :—

Name of Board.	Nominated members.	Elected members.			Total.
		By Land holders.	By Municipality.	By Jagirdars.	
Shahdadpur ..	8	6	1	..	15
Sinjhoro ..	7	6	13
Nawabshah ..	7	6	13
Sakrand ..	8	6	..	1	15
Moro ..	8	6	..	1	15
Naushahro ..	7	6	13
Kandiaro ..	8	6	..	1	15

The Assistant or Deputy Collector in charge of the Taluka has always been appointed President. This gives the Boards the right of electing their Vice-President, which hitherto they have exercised by electing the Mukhtiarkar. The District Local Board appoints an executive Committee of six members to carry on current business. The Taluka Boards also have their own executive committees. The tables give details of the revenue and expenditure of the Boards. The District Local Board maintains roads, bridges, dispensaries, staging bungalows, dharamsalas, wells, tanks and schools. The Board makes annual contributions

to the following institutions in which the district has some interest :—

	Rs.
(1) Lady Dufferin Hospital, Hyderabad ..	1,000
(2) Medical School, Hyderabad ..	750
(3) Dayaram Jethmal Sind College ..	1,000
(4) Sind Madressah ..	1,000

The progress and the present position of Municipal Government in Sind are sketched in Chapter XI of the A Volume. Of the towns in this District five had Municipal Commissions when Bombay Act VI of 1873 was extended to Sind in 1878, *i.e.*, Tando Adam, Shahdadpur, Naushahro Feroz, Moro and Kandiaro. With the exception of the first named all ceased to be Municipalities between 1884 and 1887. A Municipality was revived at Shahdadpur in 1914.

The population of Tando Adam was 10,013 at the census of 1911. The Councillors, twelve in number, are all nominated.—The Deputy Collector, Nawabshah, is President and hitherto the Resident Magistrate has been Vice-President. Table XXVIII shows the annual revenue and expenditure. The principal sources of revenue are octroi and fees from markets and slaughter houses. The revenue is expended on markets, conservancy, lighting, an arboriculture and schools (to which Government contribute onethird of the expenditure).

Shahdadpur had a population of 4,201 at the census of 1911. The Councillors, ten in number, are all nominated. The Deputy Collector, Nawabshah, is President and hitherto the Mukhtiarkar of the taluka has been Vice-President. Table XXVIII, shows the annual revenue and expenditure. They are of a similar character to those of Tando Adam.

The financial position of each municipality is sound, and neither is in debt.

EDUCATION.

*Tables XXIX A, B, C and D.**CHAPTER XII OF A VOLUME.*

Table XXIX-B shows the number of educational institutions existing in the district during the ten years ending 1915-16 and the number of boys and girls receiving instruction in them. Those recognised by the Educational Department and assisted by Government are classed as public, others as private. The primary schools described as public indigenous are those which, though they do not teach according to prescribed standards and therefore do not receive grants-in-aid, submit to inspection and get a small annual subsidy on certain conditions.

The cost of education is met from provincial revenues, Local and Municipal Funds, fees, subscriptions and endowments. Under the present rules a grant-in-aid is made by Government from provincial revenues as far as possible to all schools which conform to the prescribed conditions. The grant in each case is assessed by the Educational Inspector or by one of his assistants and is limited to onehalf of the local assets or onethird of the total expenditure of the institution during the previous official year. The details of the expenditure will be found in Table XXIX-D.

The duty of providing primary education devolves in rural and non-municipal areas on the Local Board and constitutes in municipal areas one of the statutory obligations of the Municipality. The development of these institutions during the last ten years is traced in Table XXIX-B. The extent to which the measures adopted by these public bodies are seconded by private enterprise is also exhibited.

Of the 118 schools with 6,936 pupils, 111 with 6,650 pupils are boys' schools and 7 with 286 girls' schools. About 37 per cent. of the number of pupils are Muhammadans and 49 per cent. children of cess payers. Education in these schools is not entirely free: fees for certain pupils are charged ranging from 6 pies to 2 annas. Only two schools in the district are wholly free.

There are only two such schools in the district with 397 pupils. The tuition in Municipal schools is identical with that given in Local Board schools teaching up to the seventh standard. The Municipalities charge fees to boys which usually range from 6 pies to 4 annas a month according to the standard taught, though on an average 33 per cent. of the pupils are taught free. The number of Muhammadan pupils is only about 10 per cent. of the total.

There are 129 aided schools with 3,868 pupils in the district, of which 20 with 627 pupils are girls' schools. They are all indigenous schools.

Indigenous schools consist principally of the Koran classes which have descended to the present time from the days of Talpur rule. The classes which are commonly held in mosques and in sheds adjoining the mosques are attended by Muhammadan boys and girls whom the Mulla instructs in the reading of the Koran. A Special Deputy Educational Inspector has now for some years been in charge of these schools, and if conducted on approved lines, they receive grants from Government.

The course of secondary education comprises seven standards of which the first three, known as the middle schools course, lead the pupil by easy stages to the high school course, standards IV to VII in which English is the medium of instruction. The seventh standard of the Anglo-Vernacular course is the class in which the students are prepared for the matriculation examination of the Bombay University and for the Departmental School Final Examination. There is, however, as yet no high school in the district, and boys who wish to take the high school course either go to Hyderabad, Sukkur or Shikarpur.

Anglo-Vernacular School, Bhiria.—This school was established in 1886 by the Bhiria Education Society at the instance of the then Deputy Collector, Khan Bahadur Kadirdad Khan, C.I.E. It is maintained from fees, subscriptions

and a Government grant. The fees charged range from Rs. 1-8-0 to Rs. 3-8-0 per mensem. The number of pupils on the roll was 106 in the year 1916. A boarding house is attached to the school.

In recent years ten more schools have been established, two by the Local Boards at Naushahro and Tharushah, which are mentioned below, and the remainder by private enterprise at Mithiani, Naushahro, Shahdadpur, Tando Adam, Kandiaro, Pad Idan and Bhelani. These schools are still in their infancy and only teach up to the fourth standard.

Naushahro Madressah.—This institution, as its name implies, is solely intended for Muhammadans. It teaches up to the sixth standard and in 1916 there were 119 pupils on the rolls. The fees range from Re. 1 to Rs. 2-12-0. A boarding house is attached to the institution and in 1916 there were 83 boarders in it of whom 36 were maintained free of charge out of the Madressah funds. The house is contained at present in a rented building, but a building estimated to cost about Rs. 25,000 is under construction, the money being provided by the Local funds.

Anglo-Vernacular School, Tharushah.—This school teaches up to the fifth standard. There were 156 boys on the rolls in 1916 and the fees range from Re. 1 to Rs. 2. A boarding house constructed at a cost of Rs. 18,093 is attached to the school and in 1917 there were 30 boarders in it.

A technical school was formerly in existence at Kandiaro. This and other similar schools were founded by the late Khan Bahadur Kadirdad Khan, Deputy Collector, when he was in charge of the Naushahro division. The Khan Bahadur in educational matters was probably a quarter of a century ahead of his time, and the energy which he infused into the development of technical education largely disappeared after his death. The Naushahro division taken as a whole is, however, the most advanced part of the Province educationally, and the credit for this belongs as much to the Khan Bahadur as to anyone else.

There are only three libraries in the district at Bhiria, Naushahro and Nawabshah. All are private, though the last named one receives a contribution from the District Local Board.

Libraries.

Newspapers.

No newspaper is published in the district and there is no printing press.

HEALTH.

Tables XXX-A and B, XXXI, XXXII and XXXIII.

CHAPTER XIII OF A VOLUME.

There are no hospitals yet in the district. For medical purposes the district is in charge of the Civil Surgeon, Hyderabad. There are dispensaries at nine places—seven at Taluka Head-quarters and one at Tharushah and one at Tando Adam. All are in charge of Sub-Assistant Surgeons. These are maintained by the Local Funds with assistance from Government and at Tando Adam and Shahdadpur from the Municipality. Table XXXI shows the work done at each. There is no female dispensary in the district.

There are two Veterinary dispensaries—one at Naushahro and the other at Nawabshah. The former was opened in the year 1897-98. It is maintained by the District Local Board with support from Government. In 1915-16 the number of in-patients was 61 and that of out-patients 539.

The dispensary at Nawabshah was opened only in March 1917. For the present it is accommodated in hired premises. Permanent quarters for it are in course of construction.

ADMINISTRATION.
CHAPTER XIV OF A VOLUME.

The district is divided into seven talukas as shown below :—

Taluka.	Head-quarters.	No. of tapas.	No. of dehs.	Limits.	Area in square miles.	Popula- tion.	Average annual Land Revenue.
Kandiaro	.. Kandiaro	16	85	26° 55' and 27° 14' North latitude. 68° 8' and 68° 30' East longitude.	403	64,979	Rs. 1,82,299
Naushahro	.. Naushahro	16	93	26° 36' and 27° 9' North latitude .. 67° 52' and 68° 25' East longitude.	464	84,806	2,43,502
Moro	.. Moro	12	84	26° 24' and 26° 55' North latitude.. 67° 52' and 68° 20' East longitude.	480	61,092	1,71,903
Sakrand	.. Sakrand	15	92	26° 1' and 26° 29' North latitude .. 67° 56' and 68° 31' East longitude.	517	56,758	1,33,315
Nawabshah	.. Nawabshah	24	184	26° 11' and 26° 38' North latitude.. 68° 11' and 68° 54' East longitude.	966	35,681	3,03,758
Shahdadpur	.. Shahdadpur	18	93	25° 42' and 26° 16' North latitude.. 68° 27' and 69° East longitude.	561	83,394	2,67,503
Sinjhor	.. Sinjhor	24	134	25° 45' and 26° 20' North latitude.. 68° 42' and 69° 8' East longitude.	475	45,163	2,63,380

The district came into existence on November 1st, 1912. The Sinjhero taluka was taken from the Thar and Parkar district, and the remainder from the Hyderabad district. Its creation was due to the necessity of reducing the unwieldy size of the Hyderabad district, of providing a regular administration for the tracts in both the Hyderabad and Thar and Parkar districts which had previously been in charge of the Colonization Officer, Jamrao Canal, and of placing the Thar and Parkar district in charge of a Collector instead of a Deputy Commissioner. Nawabshah was selected as the head-quarters of the new district as being the most central place. The district is divided into two sub-divisions in charge of an Assistant or Deputy Collector, and it is usually necessary for a Deputy Collector to be attached to the Naushahro charge owing to the heaviness of the work. Each of the Sub-Divisional Officers is President of the Taluka Local Boards in his charge, while the Sub-Divisional Officer of Nawabshah is President of the Tando Adam and Shahdadpur Municipalities.

The Collector is assisted by a Chitnis, an officer of the same status as a Mukhtiarkar. The accounts of the district are controlled by the Huzur Office at Hyderabad. A third Resident Magistrate was appointed in 1914 to hold his court at Nawabshah; whilst to facilitate the administration of the Nawabshah taluka a mahal has been created in it in charge of an officer of the status of a Taluka Head Munshi.

PLACES OF INTEREST.

CHAPTER XV OF A VOLUME.

This name has for more than half a century been assigned to a vast mass of ruins lying in $25^{\circ} 53'$ North latitude and $68^{\circ} 49'$ East longitude about eight miles east of Shahdadpur in the Sinjhoru taluka. They are locally known as Bahmanah, with variations. The question of the identity of these ruins has for long been a matter of controversy, and it is only possible here to give a summary of the opinions which have been formed on the subject.

Brahmanabad.

When the Arab Muhammad Kasam invaded and conquered Sind in the year 711 A.D., there was a great Hindu city with a name which has been almost universally rendered by historians as Brahmanabad. Major H. G. Raverty, author of "Mihran of Sind and its Tributaries," has produced a good deal of evidence to show that this pronunciation and spelling are erroneous and that the city in question was identical with one which was founded by Bahman, son of Isfandayar, and called by his own name, Bahman-nih, or Bahmanabad, about the year 470 B.C., i.e., nearly half a century after the conquest of Sind by the Persians (see A Volume, page 85). Whether Brahmanabad or Bahmanabad, it was a Hindu town when Muhammad Kasam attacked it, and it lay a few miles east of a river which has been assumed to be the Indus, but which Major Raverty contends was the 'lost river,' the Hakra, or a branch of it. Under Arab rule this town passed out of view, and in its stead came an Arab town called Mansurah, near to the same place, about the founding of which there are several stories. One historian Bu-Rihan al-Biruni, as quoted by Rashid-ud-din, says that when Muhammad, son of Kasam, came into Sind, he subdued Bahman-no and gave it the name of Mansuriyah. Others refer to it as a distinct place. It became the principal city of the Arab province of Sind (see A Volume, page 92) and was more populous than Multan. After Mahmud of Ghazni expelled the Abbasside governors, there was a long period during which the Hindus regained a good deal (it is difficult to say how much) of their former independence

on the east of the Indus, and Mansurah disappeared from the ken of historians, as Brahmanabad had done before it. As regards the fate of Brahmanabad, tradition disposed of the question centuries ago. Once upon a time there was a Hindu king who was a very wicked man and he reigned at Brahmanabad and his name was Dalu Rai. He made a law that every young maiden who was married to any of his subjects must be sent to his palace on the night of the wedding. There was a noble who had a beautiful daughter and she was to be married, but he was a Mussalman and to obey the king's law would blacken his face for ever. In his difficulty he sought the advice of a very holy man, who told him not to be afraid, for he would destroy the city of the wicked king. The holy man then caused it to be made known that the vengeance of heaven was to fall on Brahmanabad and that the faithful should flee and save their lives. The king scoffed at the warning: so, when a fearful earthquake shook the whole city to the ground with its walls and houses and idol temples, the king and all his courtiers were buried in its ruins. But those who heeded the warning of the holy man escaped and afterwards founded the city of Nasarpur. As this legend is fitted to almost every imposing heap of ruins in Sind, and they are many, it does not help towards the identification of Brahmanabad. Sir A. Burnes and his brother, Dr. Burnes, fixed on Kalan Kot as the most likely place and Captain Postans on Bhambor. Elliot was positive for Hyderabad, but all his topography was vitiated by the assumption that the Indus had always run in its present channel. Finally, in 1854, Mr. A. F. Bellasis, to whose memory a mural tablet stands in the Church at Hyderabad, made a searching exploration of the ruins to the east of Shahdadpur, and seemed to have finally settled the site of the famous city. Only a few extracts can be given from his narrative, which was published in the Journal of the Bombay Branch of the Royal Asiatic Society for January 1856:—

“We selected for excavation a heap of ruins standing on the verge of the principal bazar or square. We had not commenced many minutes before we came upon the edge of a wall: clearing it, we soon came upon a cross wall, and then upon another, and another, until a house with a variety of rooms began fast to take shape and disclose its proportions. We had not dug two feet before we came

to quantities of bones, and at that, and greater depths, skeletons were so numerous that it was hardly possible to dig a *paura* full of earth without bringing up particles of bones. As far as I could judge, many were undeniably human bones, and others those of cattle and of horses. The human bones were chiefly found in doorways, as if the people had been attempting to escape, and others in the corners of the rooms. Many of the skeletons were in a sufficiently perfect state to show the position the body had assumed: some were upright, some recumbent with their faces down, and some crouched in a sitting posture. One in particular I remember finding in a doorway: the man had evidently been rushing out of his house, when a mass of brickwork had, in its fall, crushed him to the ground, and there his bones were lying extended full length, and the face downwards. These bones, on exposure to the atmosphere, mostly crumbled to dust, and it was very difficult to obtain anything but fragments. But in excavating, you often obtain a good section of the skeleton, and thereby can easily tell the position of the body.

“ Besides bones, I found large quantities of pottery in great varieties, and much of a very superior description to any I see nowadays in Sind. A good deal of the pottery was glazed in colours of great brilliancy, and some of the vessels are of a fine kind of earthenware or china. Pieces of glass and crystal were also found, both in the excavations and on the surface of the ruins, in quantities, and the glass of all kinds of colours. Fragments of cups, bottles and platters were very numerous. Some of the glass was beautifully stained of a deep blue colour, and other portions were worked in raised and ribbed patterns, displaying a high standard of art in their manufacture. Stones for grinding grain, others for grinding curry-stuff and some for mixing paints; several stones for sharpening knives and tools; numerous large pieces of korundum or emery, also used by cutlers to sharpen swords and instruments; quantities of cornelians and cornelian chips, and agates, and other pretty stones, balls, beautifully turned, of ivory, agate and marble; coins, chiefly of copper, some few of silver; beads and ornaments of cornelian and glass, in every variety. In one of the rooms I found a large grain jar, ribbed in circles; its mouth was arched over with brickwork. I at first took it for a well, but afterwards discovered it to be a sunken grain jar. The diameter of its mouth was two feet, and inside it was empty for four feet, the bottom portion being filled with mould, possibly the decomposed remains of the grain.

“ Among the collection are two round solid balls of pottery, the use of which it is difficult to imagine. The most probable supposition is that they were used as missiles and may have been employed by the defenders of the city against an invading force.

"The most curious relic I found was a hexagonal cylinder, of what I imagined to be wood, or perhaps ivory, with an inscription in Arabic in Kufic character on each side. It is three inches in length and two and three-quarters in circumference. It was probably a talisman or charm, which, when wrapped up in silk or leather, was worn round the arm or neck. It was unfortunately fractured soon after it was discovered, and has been put together with glue by Mr. Richardson. The Arabic inscriptions as far as they were legible are 'Allah is merciful' etc.

"I was at first of opinion that Brahmanabad had been destroyed by an invading army who had pillaged the city and slain the inhabitants, and that time and decay had made it a heap of ruins. Old Badin, in Lower Sind, is an instance of this kind : there you see heaps of ruins not unlike these of Brahmanabad, but in the midst of the ruins you also see several buildings, such as mosques and temples, whose walls were too strong for the hand of man to overthrow and upon whose strength time and slow decay alone make any impression. At Brahmanabad the ruin of the city seems to have been complete, and, with the exception of the fragment of the tower before described, nothing appears to have escaped utter destruction. This fact, added to the number of persons whose bones were found inside the houses, together with the quantities of coins and valuables that are to this day in Brahmanabad, shook my belief that an invading army had destroyed the city.

"Nor do I believe that the city was destroyed by fire. The walls had not the appearance of a conflagration. The many delicate articles everywhere to be found in Brahmanabad, in a general conflagration of the city, must have been consumed : the glass, for instance, would have been fused ; the bones would not have been in existence ; and the delicate ornaments of the women would all have been destroyed or borne the marks of fire, whereas nothing of the kind is discernible.

"Under all these circumstances, I think it highly probable that the popular account that Brahmanabad was destroyed by an earthquake is true. It must have been some such convulsion of nature to have effected the complete and utter destruction of a city so strongly built as Brahmanabad : and I further think it probable that the same convulsion that shook the city to its very foundation changed the course of the river which once, without doubt, washed the city walls.

"On the third occasion that Mr. Richardson and I visited Brahmanabad, we excavated a house in the same bazar, but some little distance higher up, and were richly rewarded by finding some beautifully-carved figures in ivory. The largest is about four inches long, a female standing figure with a lotus in one hand ; many of the other

figures appear to be dancing-girls; the female with a looking-glass is again to be recognized, and also another warrior; an elephant, fully caparisoned, and others—in all about fifteen figures. These also were in no way defaced by the hand of the iconoclast.

“In this same house we were further repaid by finding nearly a complete set of ivory chessmen—one set white, the other black. The kings and queens are about three inches high, and the pawns about one: the other pieces of different intermediate heights. All have been made for use on a board with holes, for each piece has a peg in it, similar to chessmen used nowadays on board ship, to prevent the pieces being easily knocked down and the game disturbed.”

The finding of chessmen is peculiarly interesting in view of the tradition that chess was invented by King Dahar at Brahmanabad or Alor.

Unfortunately the coins found by Mr. Bellasis proved, when examined, to be those of Mansur bin Jambur, Abdur Rahman and other Arab rulers of Mansurah. The first of these was according to one account (see A Volume, page 91) the founder of Mansurah. For this and other reasons of a historical kind Major-General M. R. Haig put forward a suggestion in a paper published in the *Journal of the Royal Asiatic Society*, Volume XVI, Part 2, that the ruins described by Mr. Bellasis were really those of Mansurah, and that another mass of ruins, six miles to the north-east of them, were the remains of Brahmanabad. He disbelieved the story of the earthquake and attributed the desertion and subsequent decay of Brahmanabad to nothing else than a change in the course of the river, leaving it without water. Mansurah might have succumbed, he thought, to a similar fate some centuries later. General Haig further suggested the probable identity of a smaller ruin at the village of Muthalo, about two and a quarter miles to the north-west of Brahmanabad (his Mansurah) with a Buddhist monastery, Sawandi, which is known to have been near to Brahmanabad in the days of Chach and is mentioned in the “Chachhnamah.”

The next light was thrown on the subject in 1897, when Mr. H. Cousens, Superintendent of the Archæological Survey, Bombay, made deep excavations into the ruins of Bahmanah and came to the surprising conclusion that both Mr. Bellasis and General Haig were right. He found convincing evidence that he was among the remains of two cities

one of which had been built on the *debris* of the other. The lower was Hindu, but the upper unmistakeably Mussalman. The foundations of several mosques were cleared and numerous coins were found with Arabic superscriptions, some of which Mr. Cousens states to be those of the eastern Khalifas, so that they must have been brought to Sind by the Arabs. Upon this theory it is possible to construct an account of Brahmanabad not wholly inconsistent with such information as history supplies. We know that Muhammad Kasam did not destroy the Hindu town, but put a garrison in it and left the Hindus to manage it. Shortly afterwards Jaisiya, the son of Dahar, led a revolt and managed to get possession of Brahmanabad, but had to submit again and become a Mussalman, after which he was confirmed in the governorship of the town. Later on he had a quarrel with an Arab governor "on the other side of the water" and was killed in a battle against him. It is not improbable that, after this or some subsequent and similar conflict between the Arab governors and the people of the country, there was a vengeful massacre and destruction of the town. Then it would be quite in accordance with Mussalman practice to build their new town of Mansurah partly on the site of it. This might also explain the connection of Mansurah with Mahfudhah, a smaller Arab fort which preceded it and was on the opposite side of some large sheet of water. The name of Bahmanabad, or Bahman-nih, or Bahman-no (for it has several variations), remained, as General Haig says, linked to that of Mansurah, long after both were in ruins, and eventually the Arab half of it was dropped and Bahmanah-Mansurah became Mansurah. At the present day local tradition knows nothing of Mansurah. Mr. Cousens' theory of the destruction of Mansurah is that it was sacked by an enemy and the inhabitants were put to the sword. This would account for the skeletons found by Mr. Bellasis and numerous human remains found by Mr. Cousens himself, and it seems extremely probable that if the conquerors were the Sumras who undoubtedly attained to virtual if not nominal independence while the deputies of the slave kings at Bukkur and Sehwan were fully occupied with their western frontiers, the Mussalman historians would pass the incident over in silence as unimportant and discreditable.

Another very interesting discovery of Mr. Cousens was the foundation of a Buddhist *stupa* at Depar Ghangro, the ruin which General Haig identified with the real Brahmanabad. This may be the site of the Sawandi monastery which General Haig placed at Mutahlo.

The ruins of Brahmanabad are about four miles in circumference. The whole space is covered with mounds of broken and crumbled bricks, some of them fifteen feet high, with a few clear spaces, which are conjectured to have been market squares. There is no stone, but occasional lumps of charred wood seem to indicate the former presence of woodwork in the buildings. The earth of the ruins is considered to be a valuable manure and is excavated for the purpose by the cultivators of the neighbourhood.

In 1909 Mr. Cousens again visited Brahmanabad, and on consideration of his report Government decided that the remains were not worth the expense of systematic conservation and excavation. It was further agreed that there was no objection to the removal of the earth by the surrounding cultivators.

Doulatpur, a small village situated on the trunk road from Hyderabad to Rohri about 12 miles south of Moro, is only of interest as containing the mausoleum of Nur Muhammad Kalhora, the man who extended the Kalhora rule to the east of the Indus and made Sind one kingdom (see A Volume, page 109). He led a stormy life and was at last driven from his throne by Ahmed Shah the Afghan and died, it is said, at Jaisalmer in or about 1755 A.D. : so it is improbable that he is actually buried in this mausoleum which his son Muhammad Murad Yar Khan, who succeeded him for a short time, is said to have built. Moreover, one of the inscriptions on the outer door makes mention of Ghulam Shah, the builder of Hyderabad, and Sarfaraz Khan, who were son and grandson respectively of Nur Muhammad ; so probably the tomb was not built or at any rate not completed until some time after the death of the latter. It is said to have been built by one Abu Bakar, a famous architect of Tatta, and contains some fine stone carving and Persian inscriptions which unfortunately are much broken and difficult to be decyphered. This building is now declared

an ancient monument under the Act. A fair is annually held at it in the month of Zulhaj.

Halani, a small village in Kandiaro Taluka, is situated on the trunk road from Hyderabad to Rohri and is six miles distant from Kandiaro. It is rendered notable by a great Hindu fair which is held on Vesakhi, the day on which the sun enters Mekh (Aries). It is held in honour of a community of Sadhus (Hindu Ascetics) who claim to have been settled at Halani for a century. The average attendance during the six days of the fair is 10,000. Fruit, vegetables, cloth, camel saddles, etc., are sold at it.

Halani.
Kandiaro (27° 4' N. Lat. and 68° 15' E. Long.) is a large village and the head-quarter station of Kandiaro Taluka. It had a population of 4,070 at the census of 1911 and contains a Mukhtiarkar's Office, District Bungalow, Local Fund garden, Police Station, school, musafirkhana and dispensary. It possessed a Municipality, but this was abolished in 1887. The nearest railway station is Kandiaro Road, nine miles distant. The place is said to have been built during the reign of the Emperor Jehangir, which would make it nearly three hundred years old. Before it was built there was a town near the site called Patoipur which was abandoned owing to an unusual rise of the river. The site of the present town of Kandiaro was then chosen as being somewhat more elevated, and having a large number of Kandi trees growing upon it, the place took, it is supposed from this circumstance, the name of Kandiaro.

Moro (26° 40' N. Lat. and 68° 2' E. Long.), the headquarter station of Moro Taluka, is situated on the trunk road from Hyderabad to Rohri and had a population of 3,068 at the census of 1911. It contains a Mukhtiarkar's Office, Police Station, District Bungalow, primary school, Post Office and musafirkhana. It is 20 miles from the nearest Railway station Bandhi. It had a Municipality, but it was abolished in 1886. Apart from the fact that it is the taluka headquarters the place is not now one of any importance. It is said to have been founded about 280 years ago by one Bazir Fakir of the Moro tribe. The

Moro.
 Moro.

grave of an Englishman, by name Henry Ryland, a Deputy Collector who died at Moro in 1869, with an appropriate monument over it, lies near the District Bungalow.

Naushahro Feroz (situated in $26^{\circ} 50' N.$ Lat. and $68^{\circ} 11' E.$ Long.) is the headquarter town of Naushahro Taluka and had a population of 4,230 at the census of 1911. It is situated on the trunk road from Hyderabad to Rohri and is 11 miles from the nearest Railway station Pad Idan. It contains the Mukhtiarkar's Office, a District Bungalow, Resident Magistrate's Court, Sub-Judge's Court, Dispensary, Veterinary Dispensary, Madressah, Primary school, Post Office, a small library and Musafirkhana. It was once administered by a Municipality, but this was abolished in 1887. The name means "nine villages of Feroz Khan," one of the state officials in the days of Mian Yar Muhammad Kalhora, who founded it and divided it into nine wards and settled nine different castes in them. During the Talpur rule it was one of the principal depôts for the artillery of the Mirs. Weaving used to be carried on in the town on a considerable scale.

Nawabshah (situated in $26^{\circ} 15' N.$ Lat. and $68^{\circ} 27' E.$ Long.) is the headquarter town of the district and of the taluka of the same name. It was formerly a small and unimportant village although situated on the railway line, and has no historical interest. With the extension of the Nasrat Canal and the opening of the Jamrao it was selected as the headquarters of a new taluka first known as Nasrat and now as Nawabshah, and later owing to its central position it was selected as the headquarters of the new district, which came into existence in 1912. The town has not yet made much progress as a centre for trade and has not attracted as many settlers as was at one time expected. It is still little more than a village, and its market is poor.

The civil station lies to the west of the town, and is now practically completed. Its most conspicuous building is the Collector's Kacheri, which was erected in 1915 at a cost of nearly Rs. 1,34,000. Much of the building has been constructed of Jungshahi stone and a parapet of this stone

runs round it. There are two wings in which the offices are situated and between them is the durbar hall, a fine room 55 feet by 35 feet, paved with marble and with a dais at one end.

The other public buildings include the Police head-quarter lines, the Sub-Judge's Court, now used as the Resident Magistrate's Court, and the Taluka Kacheri.

Bungalows have been erected for the Collector, an Assistant Collector, the Superintendent of Police, the Executive Engineer and the Deputy Superintendent of Police. The first one is double storied. All are contained in spacious compounds and are themselves of spacious dimensions. The civil station has at present a bare appearance, as there has not yet been time for trees to grow to any height and for gardens to be developed.

Sakrand (situated in $26^{\circ} 8' \text{ N. Lat.}$ and $68^{\circ} 19' \text{ E. Long.}$) is the headquarter station of Sakrand Taluka and had a population of 488 at the census of 1911. It contains the Mukhtiarkar's Office, District Bungalow, Police Station, Musafirkhana, school, dispensary and Post Office. It is situated on the trunk road from Hyderabad to Rohri and is 13 miles from the nearest railway station, Sarhari. Except that it is the headquarters of a taluka, it is a village of no importance, and it has no historical interest.

Shahdadpur (situated in $25^{\circ} 55' \text{ N. Lat.}$ and $68^{\circ} 40' \text{ E. Long.}$) is the headquarter town of the Shahdadpur Taluka and contains a Mukhtiarkar's Office, a District Bungalow, Police Station, Musafirkhana, Rest-house, Post Office and school. It has a railway station. It formerly had a Municipality. This was abolished, but it was revived in 1914. The town is said to have been founded by one Mir Shahdad about 250 years ago, and it has for a long time been an active centre of trade and industry, the majority of the population being Hindus. The Old Gazetteer states that at that time, i.e., forty years ago, the value of the oil annually pressed at Shahdadpur was Rs. 20,000 and the value of the local trade Rs. 60,000. The population which was 2,232 then, had increased to 5,135 at the census of 1911, and cotton has now taken a prominent place in the trade.

There are two cotton ginning factories in the town at present. Shahdadpur is one of the places associated with the love story of Suhni and Mehar (see A volume, page 484) and the graves of the lovers are pointed out, but other places in Sind and the Punjab are also candidates for this distinction.

Sinjhero (situated in $26^{\circ} 2' N.$ Lat. and $68^{\circ} 51'$

Sinjhero. E. Long.) is the headquarters of the new taluka of that name. It has a

railway station on the Mirpur Khas-Khadro Railway and contains the Mukhtiar's kacheri and Police lines. The village had a population of 802 at the census of 1911. It is not a place of any historical interest.

Tando Adam or Adam jo Tando (situated in 25°

Tando Adam. $46' N.$ Lat. and $68^{\circ} 42' E.$ Long.) is a large municipal town in the Shahdadpur

Taluka, which, from its position and the number of roads that converged upon it, had acquired a considerable trade even forty years ago. Since that time its population has increased from 3,457 to 10,013 at the census of 1911, and the advent of the railway has given an impetus to its trade, so that some of the European firms of Karachi maintain agencies here and a number of cotton ginning and rice husking factories have been established. At present there are nine such factories. The population contains a majority of Hindus. The principal men of the town, however, are descendants of the Adam Khan Mari who founded it, according to tradition, about 120 years ago. The chief public buildings are the Resident Magistrate's Court, Police Station, Post and Telegraph Office, school and musafirkhana.

Thul Rukan is the local name of the ruin of a Buddhist

Thul Rukan. *stupa* situated at a distance of 16 miles south of Moro and 8 miles south-

east of Daulatpur. It lies on the east of the Hyderabad Rohri road. There is no village of any size in the vicinity, nor the remains of any. The following description is by Mr. H. Cousens (Progress Report of the Archæological Survey of India for 1897). "The *stupa*, a solid cylindrical structure of burnt brick, stands about 60 feet high and it has been decorated with three bands of pilasters in

tiers one above the other. The lowest has been destroyed utterly, probably by the Muhammadans, because it was adorned with figures in relief. The villagers told me that an irrigation engineer, who excavated the fallen *debris* which encumbers the base of the *stupa*, dug out several images and took them away. The capitals of the pilasters of the upper bands as well as some projecting string courses are decorated with beautifully carved brick-work in floral scrolls and other designs. The clay has been carved whilst wet, and was not moulded, the edges being sharp and crisp still. The *debris* around the base is piled up against it in some places ten feet high and this has all fallen from the sides and top. There is a hole in the centre of the *stupa* excavated downwards from above and now 36 feet deep. This is probably the excavation made by Sir Bartle Frere. One of the villagers, who seemed to be well primed with information concerning the *thul*, told me that some years ago a number of Muhammadans, who were celebrating some *id* close by, rushed into it through a door in its side to escape a sudden storm of rain, when the interior collapsed and buried them all. He also informed me that a former Collector found, on excavation in an outer surrounding ring of ruined heaps, an earthen pot about ten or twelve inches in diameter containing a pair of bronze anklets. I think further excavation here would be full of interest and I propose to do this during the coming touring season." The excavation by Sir Bartle Frere, referred to above, was made in February 1858, in company with Messrs. Shaw Stewart and J. Gibbs. They sank a shaft down to the base, but found nothing. The Superintendent of Archæology was unable to visit Thul Rukan again, but in 1905 Government sanctioned Rs. 1,813 for special repairs to the *stupa*. There is no local tradition or legend worth recording about the place.

* The figures against these represent the collections at the treasuries of the districts, irrespective of the district for which they were collected, and will not agree with the detailed tables XXIII, XXV, XXVI and XXIV, which show the revenues of the district.

† Includes village cess also and will not agree with table XXVII.

‡ Exclusive of forest revenue.

Note.—Part A gives figures for the financial year. In Part B, the details are for the revenue year.
